

RODRIGO GONZALEZ

SSR QA AUTOMATION

I have experience in Manual QA and Automation.

My current goal is to enter the IT labor market, to integrate into a team, to exchange the acquired knowledge, to put my skills, responsibility and experience into practice, and to accompany and reinforce the global strategy for the achievement of your company's objectives.

Graduate, C.E.N.M.A. 125 UTN, Cordoba

EXPERIENCE

QA Automation & Manual Engineer 2021 - present

- Professional Experience
- I worked as a QA Automation at Trick Games Studio LLC using Selenium with Cucumber to create test cases with Gherkins and the BDD pattern. I utilized the Page Object Model pattern and Java programming language. For my second project at the company, I used Cypress and Cucumber to create automated test cases with Javascript. I also have experience with agile methodologies such as SCRUM and Kanban.

Manual Testing Experience:

- I have experience in manual testing, including error identification through exploratory testing, and executing acceptance and regression tests. I used Jira for tracking and reporting issues. In exploratory testing, I identified errors and analyzed application behavior. In acceptance testing, I manually executed tests and reported results in Jira. In regression testing, I verified functionality after implementations and changes. Additionally, I performed smoke testing to quickly verify system stability.

Automated Testing Experience:

- In automated testing, I worked with Java, Selenium, and Cucumber, applying the Page Object Model pattern to organize selectors and improve code maintenance. In my second project, I used Cypress and Cucumber for frontend automation with Javascript. I also automated API tests, sending requests and validating responses.

Current Project:

- Currently, I am working on a mobile project, automating tests with Appium, Behave, and Selenium. This experience has deepened my knowledge in mobile test automation, using various technologies and frameworks to ensure the quality of mobile applications.

Skills Summary:

- In manual testing, I have experience in creating bugs, smoke testing, regression testing, exploratory testing, and using Jira for tracking and reporting issues. In automated testing, I have worked with Java, Selenium, and Cucumber, as well as Cypress with Javascript. I also have experience in frontend and API automation, and currently in mobile automation with Appium, Behave, and Selenium. I have worked with agile methodologies like SCRUM, with two-week sprints, and Kanban.
